The REAL COST of Semen

| | | |
|--|------------|------|
| Semen Cost per straw | \$30 | \$15 |
| 50% pregnant | \$60 | \$30 |
| Cost per heifer calf 50% Bulls | \$120 | \$60 |
| Difference per heifer calf | \$60 | |
| Difference between the value of a top cow versus average | \$500 plus | |

There is continually much discussion around the price of semen (per straw). **We firmly believe that the cost per straw is not the REAL COST!**

At Nature's Blueprint Cow we go to great lengths to identify and evaluate a bull we strongly feel will make a positive contribution to the economic function of your herd.

We do not just supply semen to get cows in calf!

We are supplying semen to breed functional, sustainable and profitable cows for your operation.

We firmly believe good semen is never expensive and bad semen is never cheap!

Now compare these heifers – in the same herd and treated the same.
Which do you feel will be the most expensive semen in the LONG RUN?

Sired by NBC Sires

A.B. by mainstream sires

See the NBC difference for yourself.

NBC Sires create sustainable, functional, profitable cows.

VALEN (A2A2)

BRED
TO
BREED

VALEN at 12 months

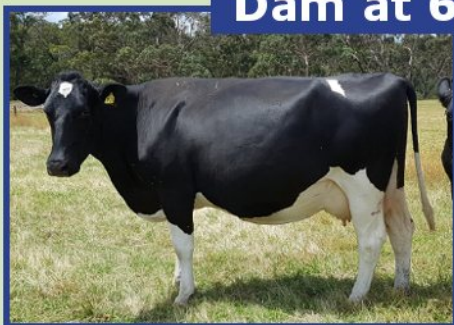

G Dam at 15 yo

Adding strength (economically) through correct body conformation will raise the economic function and hence productivity.

1. Valen's dam is a strong, fertile, consistently high PI, low BMCC cow in a very commercial environment.
2. Her dam was the same and was milked until 16 yo
3. Daughters of Valen's sire are functional, fertile, productive females
4. No feet trimming required
5. 8.0% plus milk solids is throughout the pedigree
6. Valen has worked in a large herd for 16 weeks without requiring resting or being lame where many other bulls had to be changed regularly

Dam at 6 yo

8.0%+
milk solids
throughout
pedigree

Treating the cause (not the symptoms) is the only sustainable and profitable way forward.

Price: \$25/straw
(plus gst)
